Deferral still needs recovery before the deadline

If work is deferred now, can the same cohort finish by its deadline?

1 Defer q now

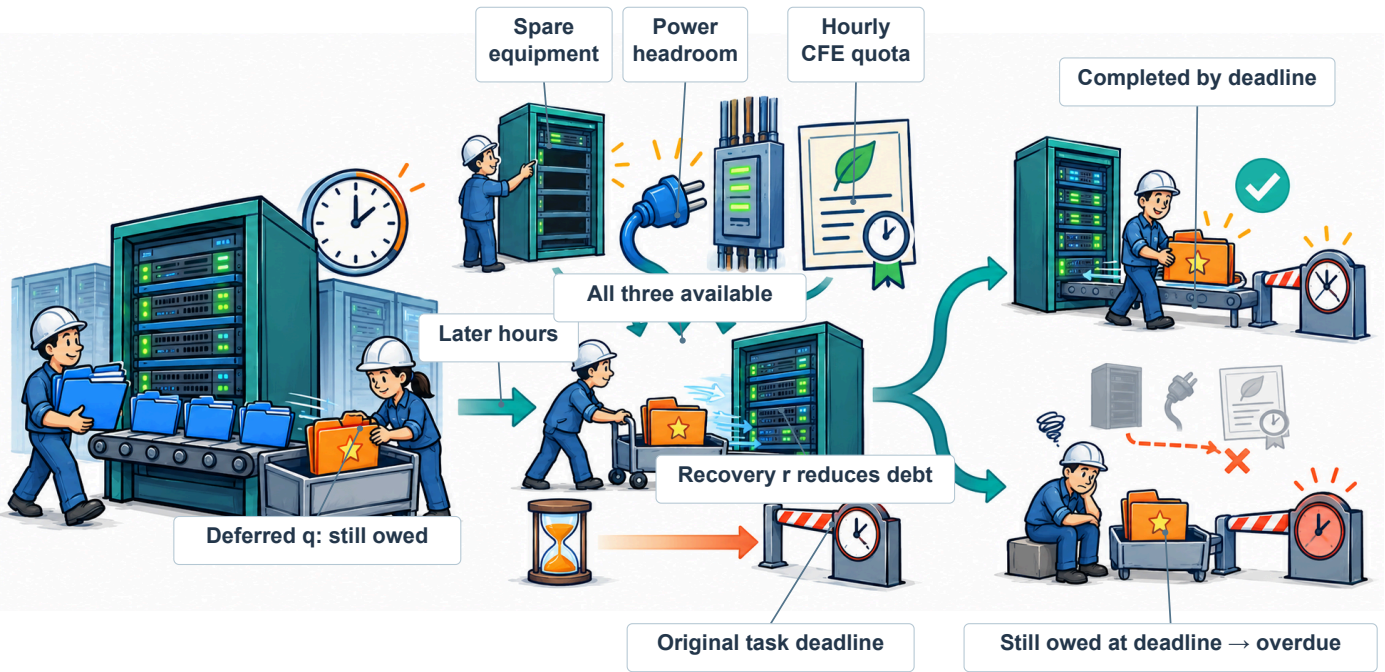

Deferred work becomes cohort debt

2 Recover r later

Equipment, power and CFE must align

3 Check the original deadline

Record completion, overdue or unresolved

1 Defer and retain debt

Blue folders: current execution
Orange folders: one deferred cohort
The original deadline still applies
Debt carries forward into later hours

2 Recover in later hours

Commissioned equipment is spare
The built grid permits recovery load
CFE is available in that same hour
Also respect budget, efficiency, deadline

3 Record the cohort outcome

Above: finished by deadline → on time
Below: debt at deadline → overdue
Later recovery retains the violation
Outcome not observed → unresolved

Deferral provides response now; deliverability also requires recovery by the original deadline.
